Compute the Average

Given N integers, compute their average correct to three decimal places.

Input Format

The first line contains an integer, N.

N lines follow, each containing a single integer.

Output Format

Display the average of the N integers, rounded off to three decimal places.

Input Constraints

1 < N < 500

 $-10000 \le x \le 10000$ (x refers to elements of the list of integers for which the average is to be computed)

Sample Input

4		
1		
2		
2		
9		
8		

Sample Output

5.000

Explanation

The '4' in the first line indicates that there are four integers whose average is to be computed. The average = (1 + 2 + 9 + 8)/4 = 20/4 = 5.000 (correct to three decimal places) Please include the zeroes even if they are redundant (e.g. 0.000 instead of 0).
